

Research Fellowship Program (RFP) provides support to distinguished researchers from the faculty and associates of research centers to conduct research that contributes to scientific progress in the fields of atomic and renewable energy. The overall duration of the fellowship program is one year.

The annual evaluation criteria for the members of the program are

- Publishing research papers in scientific journals.
- Publishing research papers in scientific conferences.
- Books/Books chapters.
- Patents.
- Research Progress reports.
- Participating in the K.A.CARE projects and activities .
- Participating in the Annual review meeting.
- Supervising postdoctoral researchers, if applicable.
- Supervising masters and doctoral students, if applicable.

Master's and PhD degree thesis scholarship program provides support to master's and doctoral degrees students to conduct research related to atomic and renewable energy fields, where the students are supervised by the Research Fellowship Program members. The overall duration of this grant is 2 years for a PhD student and 1 year for a MS student.

The annual evaluation criteria for the members of the program are

- Publishing research papers in scientific journals.
- Publishing research papers in scientific conferences.
- Research Progress reports
- Participating in the Annual review meeting

The support is directed and encouraged towards the following themes:

1. Renewable Energy Systems
2. Solar Thermal Applications
3. Renewable Energy in Water Management
4. Power and Grid Management
5. Geothermal Energy
6. Energy Storage
7. Green and Blue Hydrogen
8. Waste to Energy
9. Nuclear Energy
